

Security Papers for the Corporate Community

Joseph E. Orndorff, President & CEO, SCRIP-SAFE International

Confidential Paper® and Global Document Protection® (GDP) is a suite of tested security features that provide a high degree of document security. Because no single security feature is fool-proof, SCRIP-SAFE® incorporates a number of features that combine to effectively thwart attempts to photocopy or alter vital documents without detection. SCRIP-SAFE® International offers a number of reasonably priced security solutions.

Global Watermark Protection®:

Because scanning and photocopying technologies are increasingly sophisticated, each sheet of Confidential Paper® incorporates a genuine watermark that cannot be scanned or photocopied. Verification is simple: When held toward a light source, translucent globes appear over the entire document and viewed from either side of the document.

Standard Latent Image:

The standard latent image is "COPY/VOID" and only appears when photocopied. Verification is simple: If the latent image does not appear on a variety of photocopy machine settings, the document is not an original.

Custom Latent Image:

Inexpensive generic latent image security papers are readily available via the web. These inexpensive imitations offer a variety of paper colors and the traditional latent warning words, COPY/VOID etc. Confidential Paper® offers a prudent solution by creating a unique corporate fingerprint. In addition to the COPY/VOID warning, the unique corporate fingerprint adds the name of the company on alternate rows. Verification is simple: When photocopied, both the COPY/VOID warning words and the name of the company MUST appear.

Chemical Reactive Paper:

Confidential Paper® is chemically reactive and includes fibers that fluoresce when viewed with UV lighting and stain when touched by fresh liquid bleach.

Custom Design:

Confidential Paper® allows each customer to design a customized form and select those security features appropriate for particular situations. Uses for Confidential Paper® include medical prescription pads, legal agreements, insurance documents, titles, death certificates, bills of sale, property appraisals, etc.

Other Document Security Features:

Documents may be serially numbered, bar coded and foil stamped to provide easy document tracking and accountability.
